

FOUR MILE WARM STORAGE BUILDING

Matanuska-Susitna Borough
PROJECT FACTS

Project Scope

Design and construct a new warm storage building in the Willow Fire Service Area.

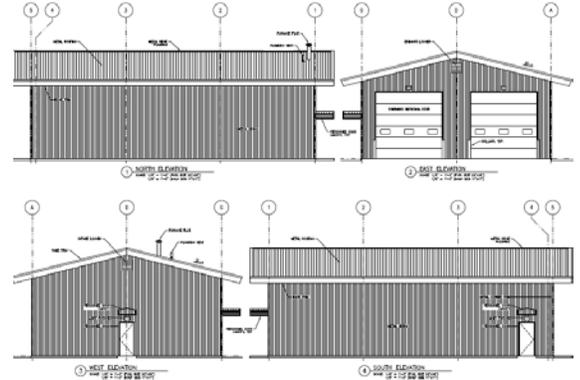

Benefits

This facility will serve a large populated section of the Willow Fire Service Area. The building will be 2,400 sq. ft. and will house fire response apparatus and have a 33,000 gallon water cistern. The cistern will allow fire trucks to fill their tanks at the warm storage building rather than having to use a more distant fill location. This will improve emergency response times in the event of a fire.

Status

The new warm storage building is located at 15210 North Four Mile Rd, off the Willow Fishhook Road.

In July 2016, the project was competitively bid as a Design/Build. An award was made to Diversified Construction as the general contractor. Construction is underway and the project is on schedule to be complete by the end of 2016.

ABOVE: Four Mile Warm Storage Building Elevations

Project Budget

The budget for construction is \$577,000.
